DA-18-064-CML-2118 "Unclassified Report"

Dear Doctor Mittwer:

In the ASTIA bibliography, I noticed that you were the author of some reports on ultraviolet micrography of bacteria. If these have been published I would be grateful to you for the references or, if available, reprints thereof. I would also appreciate your referring me to any subsequent literature on this subject. The only illustrations of which I am aware now are in Heden's work and the paper by Smiles and Dobson in the Journal of the Royal Microscopic Society.

75: 244, 1952

Yours sincerely,

Joshua Lederberg
Joshua Lederberg
Professor of Genetics

JL/jh

Mittwer, T.

Dear Dr. Lederberg:

The work you refer to was done in 1952-3 while I was in Cambridge, Mass. Unfortunately this was part of a classified military project and the work is unavailable.

Since I no longer have an UV micrographic outfit available to me, I have not kept up a bibliography on the subject. Heden's work was the major published work along those lines in 1952.

I may say that it is possible to surpass that work by far, that the field is fascinating and can yield much information. Furthermore it seems to be wide open.

Best personal regards,

Todd Mittwer
